

Powerful Web Conferencing at 20 cents per minute.

WebDemo

Conducting On-line Meetings Has Never Been E-easier or More Affordable.

WebDemo is an easy to use in-house server software solution that provides you with all the tools necessary to conduct a web-based highly interactive successful meeting. WebDemo lets you use the Internet to extend the reach and impact of your ideas to virtually anybody, anywhere in the world. All you need to conduct or join a meeting is a computer, an Internet connection and a phone line (for the audio conference).

Available in a cost-effective server package, WebDemo is available in 3, 5, 10, 15, 20, and up to 500 or more concurrent user licenses. As an example, a 10-user license package permits any 10 people to be connected at one time, from any PC. Unlike other Web conferencing products, the licenses aren't specific to any person or to any PC.

WebDemo brings you the industry's richest set of features. So your meetings are easier to set up, control, and easier to follow. Discover interactive keyboard chat, application sharing, polling and quizzing, file transfer, record and playback, VOIP, document management, desktop streaming and more.

Leader offers three innovative browser-based Web conferencing solutions—WebDemo Express, WebDemo Professional, and WebDemo Enterprise. Each product was formed to deliver simplicity and a different cost model based upon your budget and meeting needs to the online meeting world. The difference between each WebDemo product is the inherent feature set.

WebDemo Enterprise Feature Set

Presentation Sharing: Allows you to spontaneously share any presentation with full animation and slide transitions, without uploading files to a server. Allows high resolution with full screen viewing capabilities.

Viewport Presentation: The WebDemo Viewport will now allow you to click and drag your Viewport anywhere on your desktop. In addition you will have the ability to PAUSE the Viewport broadcast. In the pause mode you can setup other applications without your audience seeing what you are doing. Also the Attendee has the ability to resize the Viewport on their screen.

Transparency Tools: To further enhance the online demo experience, you can use WebDemo's transparency tools to illustrate, highlight or annotate a document or an element within a desktop application. The Transparency Tools include drawing options such Font, Line Thickness, Square, Circle, Cut/Move or Color Selector.

Application Sharing: The Application Sharing feature allows you to select which application(s) you wish to broadcast to participants. The Host may select one or more applications to broadcast.

Video Conferencing: Use the Video Conferencing feature to broadcast a pre-recorded .avi file or a live image using a standard PC Web cam to all or any of the meeting attendees. Also, you can enable the Web Cams of meeting participants for a group video conference. This feature includes selectable frame rate speeds up to 30 frames per second.

Document Management: Document Management allows registered users to place files in public or private or semi private areas for future use. All users (registered and unregistered) can access the public documents at their leisure.

Polling and Quizzing: Collaborate with your audience with true/false, yes/no questions or multiple-choice questions. The results are tallied dynamically and can be displayed on an aggregate level to all participants. Voice Chat: The Voice Chat allows you to choose an audio choice. The choices are microphone, wave file or line-in. The wave file or real media player now can be broadcasted to your audience. Or broadcast sound from your PowerPoint presentation.

Attendee List: The Attendee list displays to the Host and Attendees who are logged into the Web meeting. For the Host the Attendee List displays important performance detail and allows for enabling/disabling of communications features.

Keyboard Chat: The Host and Attendees can communicate via Keyboard Chat. The Keyboard Chat also allows the Host and Attendees to converse privately without disrupting the meeting.

Hand Raising: When presenting, it is important to know whether your Attendees have a question, would like to make a comment, or even if they are listening.

Meeting Lockout: With just a click you can block any new participants from joining a meeting in progress.

File Broadcast: File Broadcast allows the presenter of a WebDemo meeting to broadcast files to any or all attendees. As a result, files of any type can be distributed quickly to all meeting participants.

Co-browse: When the meeting Host initiates a Co-browse session, an Internet Explorer Web browser launches on the Host computer as well as on each attendee's computer. This feature allows the Host to navigate the attendee to any page on a Web site.

Transfer Host Control: WebDemo's Host Transfer feature allows users to transfer meeting control thereby the attendee becomes the presenter.

Enable Remote Control: Give control of any application on your system to remote participants. WebDemo's Remote Control feature allows users to transfer meeting control, including ViewPort, whiteboard, and chat functions to meeting Attendees thereby further enhancing collaboration. WebDemo's remote control is safe and secure.

True Color Representation: Colors between 256 colors and True Color (16-bit to 24-bit) are available for added enhancement to the presentation. This is an excellent feature for advertising and marketing professionals who place a premium on the creative component of their presentations.

WebDemo Reports: The WebDemo reports page allows administrators to generate daily, weekly, monthly, or specific range reports on number of current active users, number of current active sessions, number of total sessions for a range and individual user/session metrics.

Hide Desktop Icons Utility: Use your computer desktop as a blank whiteboard background by hiding your desktop icons while maintaining a secure background.

Record and Playback: WebDemo Record and Playback captures everything in your session including the live demonstrations, annotations, notes, visuals and even live Web slides. Meetings are automatically recorded locally on the server, and can be played back later by registered or guest users. In addition, with easy-to-use features for recording, editing, and storage, users can create professional, self-paced recordings in other industry standard formats. These recordings can be viewed outside the WebDemo environment with any standard media player such as Windows Media Player and Real Player.

Outlook® E-mail Integration: The Outlook E-mail Integration integrates Microsoft Outlook® and WebDemo by allowing a meeting session to be scheduled in Outlook from an e-mail produced by WebDemo.

Use with LeaderPhone® Teleconferencing: Web Demo can be easily used in conjunction with the LeaderPhone® Teleconferencing Service also offered by Leader. LeaderPhone® provides many enhanced web console call control features at the lowest rates and "best quality" in the conference calling industry. Conference calls can be set up from the web or right from your phone using the powerful and simple Leader Star*1 feature. Request a full LeaderPhone® brochure from Leader.
